## Probation Recidivism FY 2005 through FY 2007

February 2010

# Background and Methodology

The Department of Community Correction (DCC) has been measuring recidivism of offenders for several years as a performance measurement of the programs operating under its authority. Recidivism reflects the degree to which individuals under DCC supervision re-offend in a three year period while in the community.

By definition, recidivism occurs when an adult probationer is incarcerated in an ADC prison or DCC community correctional facility (other than a technical violator center) within a 3 year period of time under DCC community supervision.

DCC program evaluation staff refined a structured query language (SQL) program to review the regular probation and “Probation Plus” offender populations for a recidivist event. This allows the entire database to be examined for a recidivist event.

Using this SQL, staff identified a total probation population of 27,383 offenders who were admitted (had an intake) during the study period, July 1, 2004 through June 30, 2007.

# Study Groups and Cohorts

## **Study Groups**

Each year DCC studies probationers active in a three-year window of time to determine whether they have been incarcerated. Year boundaries conform to State fiscal years beginning in July and ending in June.

The 2010 probationer study group included probationers who were admitted between July 1, 2005 and June 30, 2007. When two or more intakes occurred in the study period, the earliest was chosen.

## **Intake Cohorts**

In addition to race and sex, recidivism findings are analyzed by the year in which the recidivist was first admitted to probation (had an intake) within the bounds of the three-year period under study. The group in which the probationer's intake occurred is known as his intake cohort. These groupings allow recidivism findings to be analyzed according to known circumstances, such as staffing changes, that could have had an impact on recidivism.
