## **I. INTRODUCTION**

The Arkansas Department of Correction (ADC), the Arkansas Sentencing Commission (ASC), and Arkansas Community Correction (ACC) requested assistance to produce a forecast of the state's inmate population to be completed in 2016. This forecast has been generated for eventual presentation to the Board of Correction as support for budget requests to the Governor and Legislature. This report represents a comprehensive analysis of all trends to include calendar year 2015 data.

Similar to past efforts, the current forecast was completed by analysis of current parole, probation (including drug court) and ACC facility population trends and analyzing computer extract files provided by the Department of Community Correction. This document is provided as an addendum to the prison population forecast briefing document. This document contains tables detailing statistical trends gleaned from aggregate data and from the compute extract files mentioned above. Also contained in this document is a brief summary of significant trends and an explanation of how these trends influenced the development of simulation models for the parole, probation and ACC facility populations.

## **II. THE SIMULATION MODEL AND SENTENCING POLICIES**

In 1993, the Arkansas Legislature passed the Community Punishment Act (548) which created the Department of Community Punishment. In 2001, further legislation changed the official name of the agency to the Department of Community Correction (DCC), now abbreviated (ACC). The purpose of the agency was (and is) to assume the responsibilities of management of all community punishment facilities and services, execute the orders of the criminal courts of the State of Arkansas and provide for the supervision, treatment, rehabilitation and restoration of adult offenders as useful law-abiding citizens within the community.

The ACC is subject to oversight by the Arkansas Board of Corrections. ACC supervision officers have arrest powers, specialized peace officer status, and the authority to issue parole warrants. Several entities have the authority to administratively issue sanctions: supervision officers, parole/probation supervisors, parole board, judges and senior administrators. The Director of ACC has the ultimate authority to guide the operations of the Arkansas agency and approve the administrative sanctions and incentives in use. The range of sanctions that an approved authority can unilaterally grant include: jail (for parolees, no more than seven sanctions with a limit of 21 jail days cumulative before a violation report must be issued and for probationers, no more than 10 sanctions with a limit of 30 days cumulative before a violation report must be issued); electronic monitoring; increased supervision; community service; day reporting center; written warning; and random drug testing. The range of incentives that an approved authority can unilaterally grant includes: less frequent reporting to officer; reduced supervision level; reduced drug and alcohol testing; waiver of supervision fees; extended curfew;

travel permits; verbal recognition by supervision officer; certificate of compliance; earned compliance credits; and early discharge from supervision.

Offenders enter ACC supervision via the standard probation and parole models. Probationers are sentenced to a term of supervision in lieu of prison time by the courts. Parolees enter supervision after they are deemed eligible for release from prison by both their sentencing requirements and the Parole Board. ACC facilities are used by the courts to sentence offenders to some incarceration before beginning a term of probation and also as an alternative sanction against persons on supervision to avoid full revocation to prison. This simplified explanation of the Arkansas community correction system is the baseline for the projection model developed by JFA Associates.

The forecast of the community supervision population in Arkansas was completed using Wizard projection software. This computerized simulation model mimics the flow of persons through Arkansas' community correction system over a ten-year forecast horizon and produces monthly projections. Wizard is an enhanced version of Prophet Simulation software.

Wizard attempts to mimic the state's sentencing structure and the flow of offenders from the ADC (in the case of parolees) and from the courts (in the case of probationers). Because policy and sentencing play such a crucial role in the model construction, a brief discussion of the major sentencing and policy changes impacting the model follows.

Since the ACC's creation, numerous changes had been made to Arkansas' sentencing laws. Examples of changes that have been incorporated into the Wizard simulation model include elements of the Arkansas Sentencing Standards, enacted on January 1, 1994, and of Acts 1326, 1135 and 1268. Further legislation taken into account include comprehensive corrections reforms enacted in 2011 under Act 570, emergency jail release mechanisms enacted in Acts 418 and 1721. Note: in some instances, the language in this report is taken directly from the legislation discussed.

On January 1, 1994, Arkansas put into effect a sentencing grid that uses a combination of the seriousness of the current offense and the offender's criminal history to arrive at a presumptive sentence. Guidelines in Arkansas are advisory and court use is voluntary. Courts may sentence within the entire statutory range of an offense. Felony crimes in Arkansas are categorized into ten levels of seriousness with 10 as the most serious. The offender's criminal history score is determined through allocation of points for any prior convictions/adjudications. Included within this sentencing grid are alternative sanctions to incarceration which, in large part, refer to probation. This design, seemingly, promotes the use of probation for non-violent, non-career criminals.

In March 2011 Arkansas passed ACT 570, a comprehensive corrections reform bill aimed at curbing inmate population growth and providing more complete services to offenders in the community. ACT 570 focused on 8 main initiatives:

1. Merging of Sentencing Guidelines and Sentencing and Commitment Form
2. Parole Release Risk Assessment Instrument/Parole Release from Jail
3. Changes in Drug Statutes/Weights
4. Changes in Theft/Property Threshold Amounts
5. Earned Discharge From Parole and Probation
6. 120 day Electronic Monitoring Early Release for Non-Violent Offenders
7. Intermediate Sanction for Probation and Parole Violators
8. Performance Incentive Funding(PIF)/Hope Courts

Each of the initiatives, with the exception of PIF/Hope Courts, carries a projected impact on supervision caseloads in the ACC. Each of these initiatives and their respective impacts are tracked in the prison population projections report produced for the ASC, the ADC and the ACC.

Of particular impact to parole and probation was the addition of earned discharge credits for parole and probationers, 120 day electronic monitoring and intermediate sanctions. More in-depth discussion of these changes follows.

### Earned Discharge Credits

Section 82 of Act 570 created the earned discharge release provisions. If a person is incarcerated for an eligible felony, whether by an immediate commitment or after his or her probation is revoked, and after he or she is moved to community supervision through parole or transfer by the Parole Board, or if he or she is placed on probation, he or she is immediately eligible to begin earning daily credits that shall count toward reducing the number of days he or she is otherwise required to serve until he or she has completed the sentence.

Credits equal to thirty (30) days per month for every month that the offender complies with court-ordered conditions and a set of predetermined criteria established by the ACC in consultation with judges, prosecuting attorneys, and defense counsel shall accrue while the person is on parole or probation.

The ACC will calculate the number of days a person has remaining to serve on parole or probation before that person completes his or her sentence. Any subsequent credits earned will trigger a recalculation of the number of days on a monthly basis. ACC will be able deny any credits a person earns at their discretion. Neither judicial review, nor appeal is mandatory concerning the award or denial of credits. Conviction for a new felony offense while on a person is under parole or probation supervision can result in the denial/forfeiture of any or all credits.

The following felony offenses shall be eligible for earned discharge and completion of the sentence: All Class D, Class C, and Class B felonies, except:

- An offense for which sex offender registration is required under the Sex Offender Registration Act of 1997;
- A felony involving violence under A.C.A. § 5-4-501(d)(2);
- Kidnapping, Manslaughter, or Driving while intoxicated;
- All Class A controlled substance offenses; and
- A Class Y felony.

### 120 Day Electronic Monitoring

The 120 early release clause comes from section 105 of ACT 570, and states that an inmate serving a sentence in the Department of Correction may be released from incarceration to electronic monitoring (EM) if the:

- Inmate has served one hundred twenty (120) days of his or her sentence;
- Sentence was not the result of a jury or bench verdict;
- Inmate has an approved parole plan;
- Inmate was sentenced from a cell in the sentencing guidelines that does not include incarceration in the presumptive range;
- Conviction is for a Class C or Class D felony;
- Conviction is not for a crime of violence, regardless of felony level;
- Conviction is not a sex offense, regardless of felony level;
- Conviction is not for manufacture of methamphetamine;
- Conviction is not for possession of drug paraphernalia with the purpose to manufacture methamphetamine, if the conviction is a Class C felony or higher;
- Conviction is not a crime involving the threat of violence or bodily harm;
- Conviction is not for a crime that resulted in a death; and
- Inmate has not previously failed drug court program.

The Director of ADC or the Director of ACC shall make the factors of consideration known to the Parole Board for consideration of electronic monitoring. The Board of Corrections shall promulgate rules that will establish policy and procedures for an electronic monitoring program. An inmate released from incarceration on parole under this section is to be supervised by the ACC using electronic monitoring until the inmate's transfer eligibility date or for at least ninety (90) days of full compliance by the inmate, whichever is sooner. The term of electronic monitoring shall not exceed the maximum number of years of imprisonment or supervision to which the inmate could be sentenced. The length of time the defendant participates on electronic monitoring program and any good-time credit awarded shall be credited against the defendant's sentence.

In 2015, Act 895 amended some of the policies of the 120 day electronic monitoring clause. Act 895 placed more restrictions on the use of electronic

monitoring for sex offenders and violent offenders. A complete list of these changes is not provided here. However, one primary change is that the 2015 legislation extended the offenses that make an offender ineligible for release with Electronic Monitoring from *current* to include *prior* felony sex offenses or any felony offense that involved the use or threat of violence or bodily harm. Further, current sex offense convictions were extended to include failure to register as a sex offender.

Act 895 also relaxed, somewhat, provisions concerning presumptive sentencing. Most notably, it removed the requirement that an inmate be sentenced from a cell in the sentencing guidelines that does not include incarceration and replaced it with a *presumptive incarceration range of 36 months or less* or a presumptive sentence of probation.

### Intermediate Sanctions

Lastly, in accordance with new policies and procedures, Act 570 mandated the creation and implementation of an intermediate sanctions grid that was designed to reduce the number of probation violations returned to prison.

The ACC developed and implemented statewide formal structures to determine an appropriate administrative response approach, including both sanctions and incentives. In the case of sanctions, the ACC developed the Arkansas Interventions Accountability Matrix (ArAIM), which classifies violations according to three levels of seriousness (Low, Medium, and High) with potential responses from the supervising officer being specified for each type of violation within each level of seriousness. The structure for incentives is similar, specifying specific achievements and potential incentives in response. The agency is required to use the formal structures, but deviations from the structures are permitted upon authorization by appropriate authorities. Decisions to deviate from the formal structures are authorized when the probationer/parolees' compliance with the terms of supervision are such that the formal decision matrices are inadequate or unavailable.

Any probationer/parolee under the supervision of the Department of Community Correction is subject to administrative sanction and incentives, as specified by statute, department policy and court directives.

Both ArAIM and the incentives grid were implemented statewide. Supervising officers in Arkansas have undergone statewide training in the use of administrative responses. Data is currently being collected by the ACC to support the evaluation of the outcome process, which include: type of violation; number and type of sanctions imposed; average number of jail days imposed; recidivism rate of probationers/parolees participating in administrative responses and average amount of time on supervision.

## Changes in 2013 Impacting the Current Forecast Cycle

In 2013 numerous policy changes were enacted by the Arkansas Board of Corrections. They are listed here to assist in explaining the increase in parole violator revocations in 2013.

### Arkansas Board of Corrections Policy Changes 2013:

1. ACC will not release parole holds on individuals awaiting a revocation hearing pursuant to requests from jail personnel. In 2014 there were **5,668** parole holds.
2. All requests for release of holds made by sheriffs or jail personnel must be in writing.
3. Parolees charged with a violent felony as defined by Act 1029 of 2013 or a violent or sex related misdemeanor will be jailed and a revocation hearing requested.
4. Parolees charged with any other felony will either be jailed or placed on GPS Monitoring and a revocation hearing requested.
5. Parolees who have absconded will be jailed and a revocation hearing requested. Absconding is defined as Evading Supervision for more than 180 days.
6. Parolees who have two prior violations for evading supervision for less than 180 days will be jailed and a revocation hearing requested upon a third (3) violation. A warrant for evading supervision is issued when a parolee fails to report and cannot be located for 30 days.
7. Parolees who have evaded supervision for more than 90 days that have a history of a violent felony as defined by Act 1029 of 2013 or a sex related misdemeanor will be jailed and a revocation hearing requested. All requests for revocations and denials thereof will be fully documented in the offender's case file. A parole hold will remain in effect on an ACT 3 Mental Evaluation until the hearing is completed.

The continuing impact of these changes has been:

- An increase in total parole revocation hearings held which in turn led to an increase in the number parole revocations to prison.
- An increase in both new charge parole revocations and reintroduction of a large volume of technical violators returned to prison.

## Changes in 2014 Impacting the Current Forecast Cycle

Act 1415, passed in 2014, and changed the Earned Discharge Credit (EDC) system established by Act 570. The new act has limited Act 570 sanction days to 7 instances and 21 days for parolees while 10 instances and 30 days for probation

remains allowable. What follows is a detailed breakdown of the new Earned Discharge Credit policy which began January 1, 2015.

EDC Process for one time review and awarding:

1. The supervising officer and supervisor will be notified that an offender is eligible for EDC based on sentence offense and that the offender is in compliance with supervision (based on OVG violations) when the offender has reached 50% of their supervised sentence.
2. The supervising officer will verify the following within 30 days of receiving notification that the offender is eligible for EDC:
  - a. 100% of imposed financial obligations, of the supervised sentence, have been met. Supervision Fees must have a current balance of zero (\$0). PPO must check for full payment of fines/court costs/restitution.
  - b. The supervising officer will verify through ACIC/NCIC that the offender has not been arrested on new felonies during this period of supervision or convicted of Class A or B misdemeanors.
3. The supervising officer will deliver the EDC Notification to the Prosecutor and Parole Board (if the offender is a parolee).
4. The Prosecutor and/or Parole Board have 30 days from date of delivered notification to object to the early discharge from sentence.
5. Objections from Prosecutor/Parole Board are sent to the Area Manager.
6. Objections will preclude the offender from Early Release. Offenders with no objections will be discharged from supervision. Discharge eligible offenders will only be given earned discharge credits and allowed to discharge if ALL conditions are met:
  - a. Completion of 50% of their sentence
  - b. Compliance with supervision (have not received 3 Offender Violation Guide (OVG) Violations during each twelve month period of supervision)
  - c. No new felony arrests
  - d. Have met 100% of financial obligations imposed with sentence
  - e. Have received no objections from the Prosecutor or Parole Board
7. Approved by court for Act 570 EDC release pursuant to Act 951

Earned Discharge Credit Exclusion Criteria decided by eOMIS

1. Supervision Type at the time of evaluation is:
  - Parole (ISC)
  - Probation (ISC)
  - Pre-Trial
  - Boot Camp

2. Supervision Status at the time of evaluation is:
  - Absconded
  - Closed
  - Sealed/Expunged
  - Non-Reporting (unless the Supervision Event Reason is):
    - In Treatment
    - DCC CCC
    - Mental Institution Court Order
  
3. Supervision Events within current supervision intake indicating the client:
  - Is currently enrolled as "To County Work Program"
  - Has Absconded
  - Non-Reporting (unless the Supervision Event Reason is):
    - In Treatment
    - DCC CCC
    - Mental Institution Court Order
  - Incarcerated with the reason of
    - County Jail (Out of State)
    - ADC Prison
    - Other State Prison
    - Federal Prison
    - County Jail (Parole Hold - In State)
    - County Jail (Act 1029)
    - County Jail (Parole Hold - Out of State)
  
4. Referral Status within current supervision intake on any Program Referrals is:
  - Closed/Unsuccessful
  
5. The offender has more than 2 approved OVG violations within a 12 month period based on anniversary date of beginning of supervision date.
  
6. The offender has 0 months delinquent supervision fees (zero balance at the time of evaluation).
  
7. The offender is delinquent on Court Ordered Payments known to eOMIS.

It is estimated that less than 10% of eligible offenders are initially potentially eligible prior to checking for full payment of court fines/fees/costs.

#### Changes in 2015 Impacting the Current Forecast Cycle

In August of 2015, the Arkansas Parole Board altered its policy on processing Violation Reports. While various changes were enacted, only one change affects the simulation model:

Warrants are now automatically issued whenever one or more of the following are present in a Violation Report:

- a. Any offense covered under the provisions of Act 1029 of 2013.
- b. Any violent or sex-related misdemeanor.
- c. Any offense involving the use of a weapon.
- d. Absconding supervision (evading supervision for 180 days or more).

Also of note in 2015, the ACC began tracking both probation and parole absconders as active cases versus inactive. This change is in response to a new unit created by the ACC to pursue absconders and return them to supervision (or incarceration if warranted). In response to this, JFA Associates is reporting both the old and new active/inactive caseload populations for parole and probation (Tables 8, 9, 15 and 16) in this iteration of the projections brief only. Henceforth, only the current caseload populations as tracked by the ACC will be reported. Also for this iteration of the briefing document, only the total probation and parole population forecasts for 2015 will be tracked for accuracy.

### III. SUMMARY OF MAJOR TRENDS FOR CY 2015

#### 2015 PAROLE & PROBATION FORECAST – ACCURACY

- Projections for the 2015 forecast were tracked from July 2015 to May 2016 (11 months). The total probation population (including Drug Court cases) was forecasted to an accuracy of -2.6 percent. The difference in the projected versus actual populations (shown in Table 4) was due to the projected population growth set to decline by -.12 percent per month on average while the actual population grew by +.30 percent per month on average. The probation population in Arkansas increased in 2015 as a result of an unexpected continued growth in probation admissions.
- The total parole population was forecasted to an accuracy of -5.8 percent. The discrepancy between the projected versus actual populations (shown in Table 5) was caused by the difference between the actual average monthly growth in the parole population of +0.82 percent versus the projected average monthly growth of -0.14 percent. The parole population in Arkansas grew unexpectedly in 2015 due to increased releases of violators from ADC and Parole Board efforts to reduce referrals in last quarter of 2015.

#### PROBATION TRENDS 2015

- Arkansas Department of Community Correction (ACC) probation admissions increased by 8.8 percent in 2014. Probation intakes increased again in 2015, by 10.9 percent. The increase seems to be driven by a 6.6 percent increase in persons sentenced to probation from court and a 65.1 percent increase in drug court intakes. It should be noted, this is the second consecutive year of increasing probation admissions. This is a reversal of three previous years of decreasing probation admissions (2011-2013).
- The average sentence of probation sentenced continued to remain static. Probationers in both 2014 and 2015 were sentenced to an average term of supervision of 48.5 months.
- The number of active probationers between year-end 2014 and 2015 (excluding absconders) increased by 541 cases (or 2.7 percent).
- In 2015, the ACC changed the status of a large group of probationers from inactive to active supervision. Evaders and absconders not-in-custody will now be tracked as active probationers for the purposes of this brief and in the micro-simulation model used to project the probation population. For this iteration of the projections briefing document only, tables 8 and 9 provide active and inactive end-of-year probation populations with both the “old” and “new” classifications for evaders and absconders not-in-custody.

- At year-end 2015, drug court cases accounted for 7.6 percent of the active probation supervision case load (including evaders and absconders not-in-custody).
- In 2015, for all probationers exiting supervision, the average length of stay (LOS) under community supervision was 27.7 months.
- Breaking down releases from probation by type, probation discharges averaged a LOS of 39.0 months while technical revocations and new felony revocations averaged a LOS of 5.6 and 14.3 months respectively.
- As mentioned in the previous version of this brief, technical probation revocations increased dramatically in 2014. Technical terminations grew from 1,447 in 2013 to 2,457 in 2014. This was an increase of 69.8 percent. This high level of technical violations continued in 2015 as 2,679 technical probation violations occurred.
- Of note: the average length of stay on supervision before a probation technical revocation fell to below 6 months in 2015. According to the ACC probation termination extract file, technical revocations to a CCC facility averaged below 6 months while revocations to the ADC averaged above 6 months.
- Overall, probation terminations were down by 9.2 percent in 2015 primarily fueled by a sharp decrease in probation discharges.

## **PAROLE TRENDS 2015**

- Parole intakes declined slightly between 2014 and 2015, decreasing by a slight 1.5 percent (or 162 cases). Decreases in parole terminations outpaced the decrease in intakes by falling 7.6 percent between 2014 and 2015.
- Parolees coming from the ADC in 2015 were sentenced to an average term of supervision of 61.9 months. All parole intakes in 2015 averaged a term of 58.0 months.
- Parole technical revocations increased by the largest rate in Arkansas history, 76.8 percent in 2013 to 5,186 revocations. This level of technical revocations continued in 2014 as 5,945 parolees had their supervision terminated for a technical violation. In 2015, this cohort numbered 4,701. Although these revocations are recorded as technical revocations in the parole release cohort, they are recorded mainly as parole revocations with a new charge in the prison admissions cohort (see the prison population projections companions briefing report). This discrepancy is a reflection of the “stage” at which these violations are reported. Most violations are initially technical in nature. As the justice system moves an offender from supervision to revocation to prison, a new crime can be adjudicated and reported in the

prison data system. Termination from the ACC data system may end with the input of the technical violation.

- In 2015, the ACC changed the status of a large group of parolees from inactive to active supervision. Evaders and absconders not-in-custody will now be tracked as active probationers for the purposes of this brief and in the micro-simulation model used to project the probation population. For this iteration of the projections briefing document only, tables 15 and 16 provide active and inactive end-of-year probation populations with both the “old” and “new” classifications for evaders and absconders not-in-custody.
- This active parole population increased by almost 10 percent (including evaders and absconders not-in-custody) in 2015. As was the case in 2014, the increase is due to the large increase in persons exiting the ADC to parole.
- Technical parole violators were supervised an average of 8.4 months before being revoked while new felony violators had served 13.7 months.
- In 2015, 1,042 parolees were held for Offender Violation Grid (OVG) sanctions.

## **NEW PROJECTIONS AND ASSUMPTIONS**

As mentioned earlier in this brief, ACC began including both probation and parole absconders in the active caseloads versus inactive as it has done in years past. As a result, specific projections for active and inactive caseloads have shifted to incorporate this change based on data provided by ACC via the EOMIS data system. JFA has been producing parole and probation forecasts for many years in Arkansas and experience shows that data shifts like these can cause some instability in how data is collected and reported. As a result, the individual active and inactive forecasts provided via this brief may contain an element of uncertainty. JFA will be monitoring these data changes and any effect they may have on the forecast.

## **PROBATION POPULATION**

- The overall probation population is projected to increase in the next 10 years from a total of 30,821 at the end of 2016 to 33,861 at end of 2026.
- The total probation population is broken down into two groups, offenders on active supervision and offenders under inactive supervision.
- Given the past two-year trend in admissions to probation, it is assumed probation admissions will grow steadily at just over 2.0 percent per year throughout the forecast horizon. The resulting projection is an average annual increase of 3.0 percent in the total probation population per year through the year 2026.

- At the end of December 2015, the active probation population was 25,064. It is projected to increase to 25,505 in 2016 then to grow steadily across the forecast horizon to 32,165 by December 2026.
- At the end of December 2015 the inactive probation population was 4,891. This population is projected to be 5,316 at year end 2016. By December 2026, the number of persons under inactive probation supervision is projected to be 1,696. The decrease in the inactive probation population is fueled by the earned time credits authorized under ACT 570. It should be noted this estimated rate of decline is lower than previous years as it is observed offenders are not earning credits at the original rate assumed.

## **PAROLE POPUALTION**

- The overall parole population is projected to remain static over the next 10 years from a total of 24,062 at the end of 2016 to 25,377 at end of 2026.
- The total parole population is broken down into two groups, offenders on active supervision and offenders under inactive supervision. At the end of December 2015, the active parole population was 17,840. The population is projected to increase to 18,272 by year end 2016 and then continue to increase to 23,599 by December 2026. The projected change represents average annual increases of 2.6 percent per year through the year 2026.
- At the end of December 2015, the inactive parole population was 5,591. The population is projected to increase to 5,790 in 2016. By December 2026, the number of persons under inactive parole supervision is projected to be 1,778.

#### IV. CRIME & POPULATION TRENDS

**TABLE 1  
ARKANSAS PROJECTED DEMOGRAPHIC TRENDS 2015-2025**

<b>Year</b>	<b>Total Resident Population</b>	<b>Annual Percent Change</b>
<i>Actual 2015</i>	<i>2,978,204</i>	
2016	3,007,001	0.9%
2017	3,026,555	0.7%
2018	3,044,865	0.6%
2019	3,062,041	0.6%
2020	3,078,021	0.5%
2021	3,092,955	0.5%
2022	3,107,234	0.5%
2023	3,121,147	0.4%
2024	3,134,930	0.4%
2025	3,148,708	0.4%

*Source: Statewide Field Operations Report; Note: starting in 2011 a lag in time between reclassification of revocations from "other" to "technical" began to occur. This lag was corrected for 2012 onward. It can be assumed that the majority of 'other revocations' in 2011 are actually technical. \*Note: All 2014 counts revised by ACC Research/Planning/Evaluation; \*\*2015 revocation counts revised by ACC Research/Planning/Evaluation*
